

## **NEWS ALERT**

### **Apomab® Technology selected for presentation at American Association for Cancer Research Conference**

Dr Michael Brown, Chief Scientific Advisor to Oncoxia, has been invited to speak at the American Association for Cancer Research (AACR) Conference, "Molecular Diagnostics in Cancer Therapeutic Development: Maximizing Opportunities for Personalized Treatment" to be held in Atlanta, 17- 20 September, 2007. Dr Brown will present on the Apomab® technology in a plenary session titled "Integrating Biomarkers and Drug Development".

AACR is the oldest and largest scientific organisation in the world focused on high-quality, innovative cancer research. Its reputation for scientific breadth and excellence attracts the premier researchers in the field. Researchers from around the world seek to present their findings at AACR conferences, which are attended by companies active in anticancer drug development.

Oncoxia is encouraged that an international panel of experts has recognised the potential value of the Apomab® technology and invited Dr Brown to make this presentation.

Keith Smith, Oncoxia's Managing Director, said Oncoxia welcomed the opportunity to present the Apomab® technology to an important international audience.

"The Company is committed to sharing Oncoxia's research findings with the international cancer community through high profile forums, such as the AACR Conference," said Mr Smith.

In addition, Dr Brown's presentation has been selected to be part of the AACR Virtual Meeting webcast. The AACR Virtual Meeting distributes selected events to members and the public who may be unable to attend the meeting via the internet. A link to the webcast will be provided on the Oncoxia website when it is available.
